Assignment 2: Healthcare Datasets — Basic Statistics

Task: Calculate the average Age and the average HeartRate from the five patient records provided in the CSV dataset.

Given dataset (CSV rows):
1001, 45, Female, 12345, 2024-01-15, Regular Checkup, Annual Physical, 120, 80, 72, 24.5, No, No, 1, No
1002, 62, Male, 23456, 2024-01-15, Follow-up, Diabetes Management, 138, 88, 78, 29.2, Former, Yes, 3, Yes
1003, 28, Female, 34567, 2024-01-16, Urgent Care, Flu Symptoms, 118, 76, 88, 22.1, No, No, 2, Yes
1004, 55, Male, 45678, 2024-01-16, Regular Checkup, Preventive Care, 142, 92, 76, 31.5, Yes, Yes, 2, Yes
1005, 39, Female, 56789, 2024-01-17, Follow-up, Hypertension Check, 128, 84, 70, 26.8, No, Yes, 1, Yes

1) Average Age

Ages: 45, 62, 28, 55, 39

Step 1: Sum of ages
45 + 62 + 28 + 55 + 39
= 107 + 28 + 55 + 39
= 135 + 55 + 39
= 190 + 39
= **229**

Step 2: Number of patients
n = 5

Step 3: Average Age
Average Age = (Sum of ages) ÷ (Number of patients)
= 229 ÷ 5
= **45.8 years**

2) Average Heart Rate (beats per minute)

Heart rates: 72, 78, 88, 76, 70

Assignment 2: Healthcare Datasets
Dr. Lina Awodogan
January 29, 2026

Step 1: Sum of heart rates

72 + 78 + 88 + 76 + 70
= 150 + 88 + 76 + 70
= 238 + 76 + 70
= 314 + 70
= **384**

Step 2: Number of patients

n = **5**

Step 3: Average HeartRate

Average HeartRate = (Sum of heart rates) ÷ (Number of patients)
= 384 ÷ 5
= **76.8 bpm**

Results Summary

- **Average Age = 45.8 years**
- **Average HeartRate = 76.8 bpm**
